C. Graph Metamorphosis

time limit per test: 1 second
memory limit per test: 256 megabytes

Forbidden Keywords for the Quiz: open, file, creat(, fstream, thread, process, system(, exec(

You are given a **directed unweighted** graph with ***N*** nodes in an adjacency list format. The nodes are numbered from 0 to N-1. Your task is to convert it into an adjacency matrix representation.

Input

The first line contains a integer N $(1 \leq N \leq 100)$ — the number of vertices.

The next N lines describe the adjacency list:

1. The i-th line starts with an integer k, indicating the number of nodes adjacent to node i.
2. The next k space-separated integers represent the nodes adjacent to node i.
3. Nodes are numbered from 0 to N-1.

Output

Print an N×N adjacency matrix, where the cell at row i and column j

- 1 if there is an edge between nodes i and j
- 0 otherwise.
