B. Two Sum Revisited

time limit per test: 1 second
memory limit per test: 256 megabytes

Forbidden Keywords for the Quiz: open, file, creat(, fstream, thread, process, system(, exec(

You are given two integer arrays A and B of sizes N and M, respectively, and an integer K. Both arrays are sorted in non-decreasing order. Your task is to find any pair of indices (i, j) such that:

- i is a valid index in array A $(1 \le i \le N)$
- j is a valid index in array B $(1 \le j \le M)$
- the sum A[i] + B[j] is closest to K (i.e., it minimizes |A[i] + B[j] − K|).

Input

The first line contains Three integers N, M and K $(1 \le N, M \le 2 \times 10^5, -10^9 \le K \le 10^9)$.

The second line contains N integers — the elements of array A $(-10^9 \le A_i \le 10^9)$.

The third line contains M integers — the elements of array B $(-10^9 \le B_j \le 10^9)$.

Output

Print two space-separated integers i and j the 1-based indices of the chosen pair.

If there are multiple answers, output any.
