D. Longest Subarray Sum

time limit per test: 1 second
memory limit per test: 256 megabytes

Forbidden Keywords for the Quiz: open, file, creat(, fstream, thread, process, system(, exec(

You are given an array of ***N*** integers and an integer ***K***. Your task is to find the length of the longest contiguous subarray whose sum is less than or equal to ***K***.

Input

The first line contains two integers ***N*** $(1 \leq N \leq 10^5)$ and ***K*** $(1 \leq K \leq 10^9)$ — the size of the array and the maximum allowed sum.

The second line contains N space-separated integers $a_1, a_2, a_3 \ldots a_n$ $(1 \leq a_i \leq 10^6)$ — the elements of the array.

Output

Print a single integer — the length of the longest contiguous subarray whose sum is less than or equal to ***K***.

Note

In the first example, possible subarrays with sum less than or equal to 4 are $[4], [1], [2], [1], [1, 2], [2, 1], [1, 2, 1]$. Among them, the longest size is 3.

In the second example, sum of the entire array is 5. Hence, we can take the whole array.

In the third example, no subarray has sum less than or equal to 1. Hence, the answer is 0.
