E. Longest K-Distinct Subarray

time limit per test: 1 second
memory limit per test: 256 megabytes

Forbidden Keywords for the Quiz: open, file, creat(, fstream, thread, process, system(, exec(

You are given an array of integers of length N and an integer K. Your task is to find the length of the longest contiguous subarray that contains at most K distinct elements.

Input

The input consists of:

The first line contains two integers N and K — the size of the array and the maximum number of distinct elements allowed $(1 \leq N \leq 2 \times 10^5, 1 \leq K \leq N)$.

The second line contains N space-separated integers $A_1, A_2, A_2 \ldots A_n$ — the elements of the array $(1 \leq A_i \leq N)$.

Output

Print a single integer — the length of the longest contiguous subarray that contains at most K distinct elements.
